Guidelines and Syllabus as per NEP
For
Master in Clinical Psychology
(M.Clin.Psy.)

Part-II (II Year)

Effective from Academic Session 2024-25

REHABILITATION COUNCIL OF INDIA
(Statutory Body of the Ministry of Social Justice & Empowerment)
Department of Empowerment of Persons with Disabilities (Divyangjan)
Government of India

B-22, Qutab Institutional Area, New Delhi-110016

www.rehabcouncil.nic.in

Preface

With the implementation of NEP 2020 there has been marked shift in higher education including professional education. One of the changes mandated by UGC is to discontinue all M.Phil. programmes including M.Phil. in Clinical Psychology. It has therefore, necessitated the present programme in place of M.Phil. Clinical Psychology. It is being nomenclated as “Master in Clinical Psychology of 2 year duration programme, RCI regulated”

The Rehabilitation Council of India (RCI), a statutory body developing and regulating rehabilitation education and training in the country keeping consistent with the NEP’s recommendation has committed to revamp all its programs in the area of disability and make it compliant with the credit system as proposed by the UGC and National Higher Education Qualifications Framework (NHEQF).

Accordingly, the professional track in clinical psychology has been modified to comply with reforms suggested by UGC and NITI Aayog. The modifications implemented benefit not only prospective students community to acquire professional skills in an incremental way, but professionals already in service and desirous of enhancing their competency for a wider role.

The Council assesses the effectiveness of various training components through multisource feedback and uses these results for improvement. The present revised regulations and curriculum illustrates such an effort. The expert committee has considered all the recent advances in the field and wisdom based on decades of experience with M.Phil. Clinical Psychology programme, as well as to tune it with NEP 2020 and National Credit Framework. The expert committee therefore, recommends the present document to the Council. The Council is confident that this revised curriculum is consistent with current professional knowledge and universal praxis by scholars, professors, academicians, HODs and coordinators of the program. It is considered to be valuable by all concerned in furthering professional objectives and enhancing the likelihood of desired outcomes.

The Council is pleased to forward this replaced Master in Clinical Psychology ‘Guidelines- and Syllabus’ to Registrars of Universities, Deans, of concerned faculty, Heads of Departments and other stakeholders with request for an early action to implement the new syllabus w.e.f. academic year 2025.

The Council takes this opportunity to thank all those who contributed directly or indirectly to human resource development in the area of rehabilitation, and look forward to their continued active participation.

Master in Clinical Psychology

1. PREAMBLE

Clinical psychology as one of the core disciplines in the area of mental health/illness has grown significantly in the last two decades. Today, the clinical psychology training is being offered at more than seventy recognized centers across the country with utmost efficiency. Consequently, the number of clinical psychologists available in service sectors has increased significantly. Though there is an upward trend, number of professionals currently available at various levels is no match to the number specified to face the ever growing demands in the field of mental health.

Mental health problems are continuously on the rise owing to change in life style, habits and mounting stress in personal/occupational/social domains across various sections of the society. Clinical Psychologists apply knowledge and methods from all substantive fields of biopsychosocial sciences for promotion and maintenance of mental health of individuals. Varieties of techniques and methods derived from several branches of psychology are used in promotion of mental health, and in prevention, diagnosis, treatment and rehabilitation of mental and physical disorders/ problems where psychological factors play a major role. Different methods and forms of psychological techniques are used to relieve an individual's emotional distress or any other forms of dysfunction or disability. Thus, Clinical Psychologists play an important role for optimizing healthcare delivery system and there is an urgent need to train more number of professional clinical psychologists.

The Council is committed to give the needed impetus to human resource development in the field of clinical psychology and work towards establishing more centers for training in clinical psychology in the coming years. Also, efforts will be made to ameliorate unequal distribution and under utilization of human resource pool created to equip our professionals with the latest developments in the field through CRE programs, so that they deliver patient-centered services effectively and competently.

In the recent times, a trend has been observed for training in clinical psychology to be shifted from traditional mental hospital-based programs to programs offered by higher education institutions including medical colleges and NGOs. Consequently, there has been a steady progress in increasing manpower for practice and research in clinical psychology. Though, the feedback received from the participants of these training programs is encouraging, it is our endeavor to keep pace with changing times and make available the most updated information for trainees in various settings.

The Council hopes that the following revised guidelines would help centers conducting Master in Clinical Psychology program to provide a cohesive and meaningful training so that the trainees develop to their fullest potential and shall be able to discharge their responsibilities competently as clinicians, teachers/trainers, researchers and administrators in the field of mental health. This document is also meant to serve as guidelines for institutions intending to start the training program in clinical psychology to strengthen their resource base in terms of infrastructure and personnel for providing an effective training in the field of clinical psychology.

The syllabus is specified in terms of hands-on experiential training with sound theoretical foundations. The teachers need to be aware of these components and impart training for progressive development of skills, knowledge and understanding of various techniques, theories, approaches and methods. This model will allow all trainees to develop a range of skills and knowledge essential to the practice of clinical psychology.

Depending on the available resources and expertise at the centre, offering this programme, the appropriate academic formats in content area of each paper can be worked out. Though a standardized structure is adopted across different papers, sufficient flexibility to enrich the learning and training experience of the trainees is also incorporated. The practical and clinical work should be used to integrate all learning across the subjects, such as Psychiatry, Neurology, Cardiology, Oncology, Paediatrics etc. while learning being used at varying stages to integrate and apply knowledge and skills developed.

The current syllabus will accommodate the incorporation of any new and emerging practices/trends into the content areas as practice change. Therefore, inclusion of additional study, emerging concepts/practices etc. into the training program so that the training reflects current practices and trends, is the sole responsibility of the centre. For the wider exposure and enriched learning of the trainees, additional inputs may be required by deputing the trainees at the suitable settings such as school, community, sports and rehabilitation centres, defence (military and para-military) and forensic centres etc. The training institute can act at its discretion as long as it reflects national and international practices, and does not compromise with the mandate of this programme and learning activities suggested in the core model.

Teachers are required to apprise themselves of the latest developments in the field of clinical psychology through conferences, seminars, workshops and other national and international professional development programmes to ensure delivery of quality education and training. The centers should therefore make enough provisions for the teachers to upgrade their knowledge/skills as often as it required.

Dissertation projects could be flexible or specialized to suit the center needs and priorities. However, the topic of study should reflect contemporary developments and practices, and the trainees would have had an opportunity to use a range of techniques, tools and approaches to solve problem while executing the research project.

AIM&OBJECTIVES

Aim

The aim of this programme is to prepare trained Clinical Psychologist to function as an independent clinician, competent to deliver mental, physical and rehabilitative healthcare services.

Objectives

The course is developed as a rigorous two-year program with extensive theoretical inputs and widespread clinical experience to acquire the necessary skills in the area of Clinical Psychology. On completion of the course, the trainee is expected to perform the following functions:

1. Diagnose and assess mental health problems.
2. Conceptualize specific child, adolescent, adult and geriatric mental health problems within a psychological framework, giving due consideration to psychosocial/ contextual factors, and carryout relevant treatment/management.
3. Apply psychological principles and techniques in rehabilitating persons with mental health problems and disabilities.
4. Work with the psychosocial dimensions of physical diseases, formulate and undertake focused/targeted psychosocial interventions.
5. Work with community to promote health, quality-of-life and psycho-logical well-being.
6. Undertake research in the areas of clinical psychology such as, mental health/illness, physical health/diseases and relevant societal issues viz. misconception, stigma, discrimination, social tension, gender construction, life style etc.
7. Undertake responsibilities associated with teaching and training in core and allied areas of Clinical Psychology.
8. Undertake administrative and supervisory/decision-making responsibilities in mental health area.
9. Provide expert testimony in the court of law assuming different roles.

REQUIREMENTS TO START Master in CLINICAL.PSYCHOLOGY PROGRAMME

There shall be an independent Department of Clinical Psychology, headed by a qualified senior most Clinical Psychologist at the level of Professor/Additional/Associate Professor having valid RCI CRR registration in the institute/ university.

There shall be minimum two clinical psychology faculty members on full time basis at the department, and ancillary staff as specified below:

- i)At the level of Associate Professor or above – one member
- ii)At the level of Assistant Professor/Lecturer or above – one member

Ancillary staff

1. One Office staff /Clerk for documentation and records keeping
2. One Lab Assistant
3. One OPD Assistant
4. One Attendant

Guidelines for faculty recruitment and promotion

Professor/Additional Professor: M. Phil. Clinical Psychology, and Ph.D.(in Psychology/ Clinical Psychology) with 9 years of teaching experience, out of which 3 years as Associate Professor + 5 research publications in indexed journal as first/corresponding author.

Associate Professor: M.Phil Clinical Psychology and Ph.D. (in Psychology/ Clinical Psychology) with 5 years of teaching experience either as Lecturer or Assistant Professor + 3 publications in indexed journal as first/ corresponding author.

Assistant Professor: M.Phil Clinical Psychology with one year clinical/research/teaching experience with valid RCI CRR registration.

NB:—The term ‘experience’ refers to post-M. Phil. clinical teaching experience/ research experience in any institute or organization recognized by Statutory Bodies such as RCI/ MCI/ UGC, etc. It is mandatory as per the RCI Act of 1992 that core faculty members are registered professionals of RCI under the category of “Clinical Psychologist”.

Sufficient clinical material/facilities shall be available at the department to meet the requirements outlined in the syllabus. A minimum turnover of 150 cases (old and new together) on an average per month shall be required for an annual intake of FOUR candidates, and there on for every 30 case increase in the monthly clinical turnover, the intake shall be increased by ONE candidate, provided the faculty-candidate ratio as given in 4.1 is fulfilled. Of the total turnover at least 50% of the cases shall be undergoing psychological treatment(s) of some form viz. psychotherapy, behavior therapy, biofeedback, hypnosis, counseling, marital therapy, group therapy, sex therapy etc. Clinical work-ups or psychological assessments alone without therapy interventions are considered suboptimal for professional training in clinical psychology.

Acceptable infrastructure in terms of adequately furnished rooms for every faculty members and trainees to carry out professional activities like working up of cases, interviewing, counseling, therapies, testing etc. for indoor or outdoor cases basis shall be available at the department. Standard psychological tests, equipment /apparatus, questionnaires, scales, inventories, clinical rating scales related to all primary domains shall be available in sufficient quantity, and freely accessible to all concerned. Wherever possible the vernacular versions of the tests materials along with local norms shall be made available. The required minimum infrastructure (for an annual intake of Four candidates) include, but not necessarily limited to;

- i) Psychological tests - 4 copies/sets each of the core tests as given in section on ‘Practical–Psychological Assessments’
- ii) Clinical rating scales-For common conditions of childhood, adolescence and adult such as anxiety, mood, speech, language and thought, adjustment, personality, developmental, behavior, cognitive, pain, conduct, sexual disorders, and in specialty areas
- iii) Computerised psychological assesement tools – 5 numbers
- iv) Behavior therapy apparatus -2 numbers
- v) Biofeedback -1 each, atleast for 2 parameters
- vi) Classroom-1number with multimedia facilities for conducting in-house academic activities, on routine basis
- vii) Computers – 5 numbers with printer and internet facilities+statistical software packages
- viii) Photocopier Machine - 1

Active liaison with departments like Psychiatry, Medicine, Surgery, Neurology, Neurosurgery, Pediatrics, Social Work and such other allied specialties shall exist in addition to direct or self-referrals, so that exposure to a broad range of clinical problems shall be possible. Depending on the presence/absence of facilities at the parent institute, the trainees may be posted to other centers as deemed necessary for an exposure in specialty areas such as child guidance, family therapy, addiction, neuro/cognitive rehabilitation, palliative/hospice center, cancer and such other areas of expertise while training in core areas continues at the parent institute. In such events, the period of posting for extra-institutional learning shall not exceed three calendar months in an academic year and should happen under the appropriate supervision of an expert in the area.

Adequate and updated library facilities with textbooks, reference books, important national and international journals (hard or soft copy), educational audio/video CDs, and access to Internet shall be easily available and accessible to all trainees. In addition, certain reference books, therapy manuals, index books etc. those required by the trainees for a quick reference during the working hours shall be stocked at the departmental library and shall be made accessible easily.

The following is the Checklist on the prerequisites to start M. Phil program. Even if one of the items is "no", the center cannot start the program, and therefore centers are advised to remedy the shortcomings, if any, before applying to the Council for approval.

*=Action required at the time of applying

Prerequisite-I: Is there an Independent Department of Clinical Psychology at the Institute for rendering mental health services and for imparting academic training?

* Attach documents in evidence of having created and/or established an independent department for professional services and training

Prerequisite-II: Is the Department of Clinical Psychology functioning with minimum Two permanent and fulltime qualified Clinical Psychology faculty members? Is one of them at Associate Professor or above ranking (see aforementioned criteria), and has been put in-charge of the Department?

* Attach qualification and experience details of all faculty members functioning at the department along with a copy of appointment order and joining report

Prerequisite-III: Are the faculty members appointed have registered with the Council under Clinical Psychology category and have a valid CRR number?

* Attach a copy of the registration certificate along with recent passport photograph

Prerequisite-IV: Does the department have atleast one office staff/clerk for documentation and records keeping, one Lab Assistant, one OPD Assistant and one attendant ?

* Attach a copy of the document

Prerequisite-V: Does the Department of Clinical Psychology has a minimum turnover of 150 cases (old and new together) with mental health issues/problems, on an average per month?

* Attach extracts of previous 6 month outpatient/in patient register and monthwise break-up of cases seen

Prerequisite – VI: Has the Department been equipped with standard psychological tests, equipment/apparatus, and questionnaires/scales in primary domains relating to mental disorders?

* Attach a list of all materials

Prerequisite-VII: Does the Department has adequate library support for the proposed training program which includes minimum number of books/journals in the field of mental health including clinical assessments, therapies and techniques?

* Attach a list of books/journals/audio & video educational CDs/e-books & journals available in each of the specialty areas

Prerequisite-VIII: Does the Department has adequate access and use of Information and Communication Technology?

* Attach a list of facilities available in the department/campus

Prerequisite-IX: Has institute obtained a No Objection Certificate(NOC) by the competent State Government Authority? However the government institutioes (state or central) shall be exempted of it.

* Attach a copy of the document

Prerequisite-X: Has institute obtained an affiliation letter from the Registrar or a competent authority of the affiliating University with respect to the proposed training program?

* Attach a copy of the document

REGULATIONSOFTHECOURSE

Number of Seats

Since this is a fulltime clinical training course, the number of candidates being trained at the center will depend on number of qualified fulltime faculty members working in the department on regular/contractual basis, the clinical facilities and infrastructure available (refer 3.3 & 3.4). In order to make the training effective therefore, the intake of candidates in an academic year shall not exceed the following ratio.

Professor/ Additional Professor -1:8

Associate Professor – 1:6

Assistant Professor/Lecturer-1:4

Part-time / superannuated qualified professional members may render their input as deemed necessary to effective/ smooth conduct of the course as Guest Faculty member. However, these members are not considered as "Core Faculty" and annual intake of candidates shall not be linked to the presence of these faculty members at the center.

Entry requirement

Minimum educational requirement for admission to this course will be _4 years B.A./B.Sc. degree in Psychology from a university recognized by the UGC with a minimum of 55% marks in aggregate. For SC/ST category, minimum of 50% marks in aggregate is essential, as per GOI. The candidates who have completed their graduation programme in 3 years of Psychology shall have to pass fourth year Bridge Course or first year of Masters Programme in Psychology with minimum of 55% marks are also eligible.

Admission Procedure

A selection committee that includes Head of the Department of Clinical Psychology shall make admission on the basis of an entrance examination, consisting of a written test and interview. The weightage of entrance test shall be 70% whereas the interview will be of 30%. List of candidates so selected/ admitted to the course must be sent to RCI within a month of admission formalities are completed. No changes shall be permitted once the list of admitted candidates for the academic year is sent to the Council. The institute shall advertise the admission dates, number of seats and the procedure in national daily, a regional paper, institute's website and social media platform. The admission procedure must be disabled friendly.

Duration

This is a fulltime clinical training course providing opportunities for appropriate practicum and apprenticeship experiences for 2 academic years.

Attendance

Course of the study must, unless special exemption is obtained, continuously be pursued. Any interruption in a candidate's attendance during the course of study, due to illness or other extraordinary circumstances must be notified to the Head of the Institution/concerned authority and permission should be obtained. Under any circumstances the course must be completed within 4-yr from the date of enrollment.

A minimum attendance of 80% (in each year including in all academic-activities) shall be necessary for taking the respective examination.

Thirty days of casual leave, maximum of fifteen days per academic year, shall be permitted during the two-year course period.

Part-II (Year-11)

Biological Determinants of Behavior and Neuropsychology

Aim:

Brain disorders cause symptoms that look remarkably like other functional psychological disorders. Learning how brain is involved in the genesis of normal and abnormal behavioral/emotional manifestation would result in better clinical judgment, lesser diagnostic errors and increase sensitivity to consider and rule out a neuropsychological origin or biochemical mediation of the psychopathology. Also, current researches have indicated many pharmacological agents dramatically alter the severity and course of certain mental disorders, particularly more severe disorders. Therefore, the aim of this course is to provide important biological foundations of human behavior and various syndromes. The main focus is the nervous system and its command center - the brain.

Objectives: On completion of the course trainees are required to demonstrate ability to:

1. Describe the nature and basic functions of the nervous system
2. Explain what neurons are and how they process information
3. Identify the brain's levels and structures, and summarize functions of the structures
4. Describe the biochemical aspects of the brain and how genetics increase our understanding of behavior.
5. State what the endocrine system is and how it regulates the internal environment and affects behavior.
6. Discuss the principles of psychopharmacology and review the general role of neurotransmitters and neuromodulators in the brain.
7. Describe the monoaminergic and cholinergic pathway in the brain and the drugs that affect these neurons.
8. Describe the role of neurons that release amino acid neurotransmitters and the drugs that affect these neurons.

Academic Format of Units:

Lectures, seminars and demonstrations by the experts in specific discipline, disease, topics such as by Anatomist, Biochemist, Physiologist, Psychiatrist, Neurologist and Neurosurgeons are required to impart knowledge and skills in certain domains. Depending on the resources available at the center these academic activities can be arranged.

Evaluation: Involving long and short essays and viva

Syllabus:

Unit-I: Anatomical sub-divisions of the human brain; the surface anatomy and interior structures of cortical and sub-cortical regions; anatomical connectivity among the various regions; blood supply to brain and the CSF system; cyto architecture and modular organization in the brain; Communication within (membrane potential, action potential) and between neurons (neurotransmitters, neuromodulators and hormones).

Unit-II: Biochemistry of the brain: Biochemical and metabolic aspects of brain; medical genetics;

structure and function of chromosomes; molecular methods in genetics; single-gene inheritance; cytogenetic abnormalities; multifactorial inheritance; biochemistry of genetic diseases

Unit-III: Neurobiology of sensory-motor systems: Organization of sensory-motor system in terms of receptors, relay neurons, thalamus and cortical processing of different sensations; principle motor mechanisms of the periphery (muscle spindle), thalamus, basal ganglia, brain stem, cerebellum and cerebral cortex; neurobiology of drives, motivation, hunger, thirst, sex, learning, memory, emotion, and personality, regulation of internal environment: role of limbic, autonomic and the neuroendocrine system in regulating the internal environment; reticular formation and other important neural substrates regulating the state of sleep/wakefulness

Unit-IV: Psychopharmacology: Principles of psychopharmacology, sites of drug action (effects on production, storage, release, receptors, reuptake and destruction); drugs commonly used to treat psychiatric disorders and putative mechanisms of action, role of neurotransmitters and Neuro modulators (acetylcholine, monoamines (DA, NE and 5-HT), amino acids, peptides, lipids) in various aspects of behavior; neurobiology of mental disorders - neurochemical, metabolic and genetic aspect of major mental disorders, neurodevelopmental and behavioral disorders;

Part-B: Clinical Neuropsychology

Aim:

The course aims to provide an understanding of the relationships between the brain and cognition, affect and behavior across developmental stages through clinical evaluation and follow-up of a variety of cases with brain disease and injury.

Objectives: At the end of the course trainees,

1. Discuss at ease the functional aspects of different brain networks, and can explain how these would affect an individual in daily life situations and make recommendations for interventions and social rehabilitation in affected cases.
2. Describe what kinds of neuropsychological deficits are often associated with lesions of frontal, parietal, temporal and occipital lobes of the brain, and carry out the indicated neuropsychological assessment employing any valid battery of tests.
3. Describe what kinds of neuropsychological deficits are often associated with subcortical lesions of the brain.
4. List symptoms those are typical of focal and diffuse brain damage.
5. Enumerate the characteristics of clinical syndrome and the nature of neuropsychological deficits seen in various cortical and subcortical dementias.
6. Describe the neuropsychological profile of principal psychiatric syndromes.
7. Demonstrate an understanding of functional neuro-imaging techniques and their application in psychological disorders and cognitive neuroscience.
8. Demonstrate an understanding of the principles involved in neuropsychological assessment, its strengths and weaknesses, and indications.
9. Describe the nature of disability associated with head injury in the short and longer term, methods of remedial training and their strengths and weakness.

Academic Format of Units:

The learning would be primarily through clinical assessment of cases with brain lesions and disorders, and supplemented by lectures, seminars and tutorials, allowing trainees to participate in

collaborative discussion.

Evaluation: Practical/clinical exam in neuropsychological assessment with cases having a brain lesion/disorder and theory aspects by long and short essays, and comprehensive viva.

Syllabus:

Unit-I: Introduction: Relationship between structure and function of the brain; the rise of neuropsychology as a distinct discipline, logic of cerebral organization; localization and Lateralization of functions; approaches and methodologies of clinical and cognitive neuropsychologists.

Unit-II: Frontal and temporal lobe syndrome: Frontal lobe - disturbances of regulatory functions; attentional processes; emotions; memory and intellectual activity; language and motor functions; temporal lobe - special senses, hearing, vestibular functions and integrative functions; disturbances in learning and memory functions; language, emotions, time perception and consciousness.

Unit-III: Parietal and occipital lobe syndromes: Parietal lobe - disturbances in sensory functions and Body schema perception; agnosia's and apraxia's; occipital lobe - disturbances in visual space Perception; color perception; writing and reading ability.

Unit-IV: Neuropsychological assessment: Principles, approaches, scope and indications and issues involved in neuropsychological assessment of children, functional domains in children; Categorization of major brain functions, localization of functions in the brain, content of Empirically validated batteries such as LNNB, Halstead-Reitan battery, PGI-BBD, NIMHANS and other batteries of neuropsychological tests in current use and their application, Neuropsychological profile: Neuropsychological profile of cortical and subcortical dementia; major mental disorders, substance use disorders, neurodevelopmental disorders

Unit-V: Neuropsychological rehabilitation: Principles, objectives and methods of neuro-rehabilitation of traumatic brain injury, organic brain disorders, major psychiatric disorders and behavioural disorders; scope of computer-based retraining, neuro feedback, cognitive aids; application of functional human brain mapping techniques such as QEEG, EP & ERP, PET, SPECT, fMRI etc.

Behavioral Medicine

Aim:

Health psychology, as one of the subspecialties of applied psychology, has made a notable impact on almost the entire range of clinical medicine. The field deals with psychological theories and methods that contribute immensely to the understanding and appreciation of health behavior, psychosocial and cultural factors influencing the development, adjustment to, treatment, outcome and prevention of psychological components of medical problems. The aim of behavioral medicine is to elucidate the effects of stress on immune, endocrine, and neurotransmitter functions among others, psychological process involved in health choices individuals make and adherence to preventive regimens, the effectiveness of psychological interventions in altering unhealthy lifestyles and in directly reducing illness related to various systems. Further, to provide the required skills and competency to assess and intervene for psychological factors that may predispose an individual to physical illness and that maintain symptoms, in methods of mitigating the negative effects of stressful situations/events, and buffering personal resources.

Objectives: On completion of the course, trainees are required to demonstrate ability to:

1. Appreciate the impact of psychological factors on developing and surviving a systemic illness.
2. Understand the psychosocial impact of an illness and psychological interventions used in this context.
3. Understand the psychosocial outcomes of disease, psychosocial interventions employed to alter the unfavorable outcomes.
4. Understand the rationale of psychological interventions and their relative efficacy in chronic disease, and carry out the indicated interventions.
5. Understand the importance of physician-patient relationships and communication in determining health outcomes.
6. Understand how basic principles of health psychology are applied in specific context of various health problems and apply them with competence.
7. Demonstrate the required sensitivity to issues of death and dying, breaking bad news, and end-of-life issues.
8. Carry out specialized interventions during period of crisis, grief and bereavement.
9. Understand, assimilate, apply and integrate newer evidence-based research findings in therapies, techniques and processes.
10. Critically evaluate current health psychology/behavioral medicine research articles, and present improved design/methods of replicating such research.
11. Demonstrate the sense responsibility while working collaboratively with another specialist and foster a working alliance.

Academic Format of Units:

Competency/skills are imparted through supervised workups, assessment and practical work of carrying out various treatment techniques within clinical context. Depending on availability of resources at the parent center, the trainees may be posted for extra-institutional learning. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to impart the necessary knowledge and skills.

Evaluation: Theory - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Syllabus:

Unit-I: Introduction: Psycho-behavioral influence on neuroendocrine, neurotransmitter and neuro-immune responses to stress, negative affectivity, behavioral patterns, and coping styles, psychophysiological models of disease, theoretical models of health behavior, scope and application of psychological principles in health and illness; research and developments in health

psychology, psychophysiology, psychoneuroimmunology, psychobiology, socio biology and their implications; demonstrated effects of psychological interventions on the biology of brain and Implications.

Unit-II: Central nervous system: Cognitive, behavioral, emotional disturbances in major CNS diseases like cerebrovascular (stroke, vascular dementia etc.), developmental (cerebral palsy), degenerative (Parkinson's etc.), trauma (traumatic brain and spinal cord injury), convulsive (epilepsy), and infectious (AIDS dementia), psychological assessment, intervention and rehabilitation of this population.

Unit-III: Cardiovascular system: Psychosocial, personality, lifestyle, and health practice issues, psycho-behavioral responses including coping with illness and functional loss in hypertension, MI, following CABG and other cardiovascular conditions, salient issues with regard to quality-of life and well-being, empirically proven methods of psychological management of CVS diseases.

Unit-IV: Respiratory system: precipitants, such as emotional arousal, and other external stimuli, exacerbates such as anxiety and panic symptoms, effects, such as secondary gain, low self-esteem in asthma and other airway diseases, psychological, behavioral and biofeedback strategies as adjunct in the management.

Unit-V: Genitourinary/renal/reproductive system: Psychosocial issues in male/female sexual dysfunctions, micturition/voiding problems including primary/secondary enuresis, end-stage renal disease, dialysis treatment, primary and secondary infertility, empirically validated psychological and behavioral interventions in these conditions.

Unit-VI: Gastrointestinal system and Dermatology: Evaluation of psychological factors including personality characteristics and stress/coping style in functional GI disorders (such as irritable bowel syndrome, inflammatory bowel disease, peptic ulcer disease, esophageal disorder etc.); role of stress and anxiety in psycho-dermatological conditions (such as psoriasis, chronic urticarial, dermatitis, alopecia etc.); impact of these on self-esteem, body image and mood, role of psychological interventions such as relaxation, stress management, counseling, cognitive restructuring and biofeedback strategies.

Unit-VII: Oncology and Pain: Psychosocial issues associated with cancer - quality of life, denial, grief reaction to bodily changes, fear of treatment, abandonment, side effects, recurrence, resilience; physiological and psychological processes involved in pain experience and behavior, assessment tools for acute and chronic pain intensity, behavior, and dysfunctions/disability related to pain, psychological interventions such as cognitive, behavioral, biofeedback and hypnotic therapies.

Psychotherapy and Counseling**Aim:**

Impart knowledge and skills necessary to carry out psychological interventions in mental health problems with required competency. As a prelude to problem-based learning within a clinical context, the trainees are introduced to factors that lead to development of an effective working therapeutic alliance, pre-treatment assessment, setting therapy goals, evaluation of success of therapy in producing desired changes, and variables that affect the therapy processes. Further, the aim is to equip the trainees with various theories of clinical problems, and intervention techniques, and their advantages and limitations.

Objectives: By the end of Part – II, trainees are required to demonstrate ability to:

1. Describe what factors are important in determining how well patients do in psychotherapy?
2. Demonstrate an ability to provide a clear, coherent, and succinct account of patient's problems and to develop an appropriate treatment plan.
3. Demonstrate a sense of working collaboratively on the problem and ability to foster an effective

alliance.

4. Demonstrate a working knowledge of theoretical application of various approaches of therapy to clinical conditions.
5. Set realistic goals for intervention taking into consideration the social and contextual mediation.
6. Carry out specialized assessments and interventions, drawing on their knowledge of pertinent Outcome/evidence research.
7. Use appropriate measures of quantifying changes and, apply and integrate alternative or Complementary theoretical approach, depending on the intervention outcome.
8. Demonstrate skills in presenting and communicating some aspects of current intervention work for assessment by other health professionals, give and receive constructive feedback.
9. Demonstrate ability to link theory-practice and assimilate clinical, professional, academic and ethical knowledge in their role of a therapist.
10. Present a critical analysis of intervention related research articles and propose their own Methods/design of replicating such research.

Academic Format of Units: Acquiring the required competency/skills would be primarily through clinical workups and carrying out of various treatment techniques, under supervision, within clinical context. The trainees are required to be involved in all clinical service activities – institutional or community based, of the center. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to be planned to impart the necessary knowledge and skills.

Evaluation:

Theory - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Syllabus:

Unit-I: Introduction: Issues related to training therapists; ethical and legal issues; rights and responsibilities; consent/assent issues; planning and recording of therapy sessions; structuring and setting goals; factors influencing the therapeutic relationship; pre- and post-assessment; practice of evidence-based therapies; managed care.

Unit-II: Affective psychotherapies: Historical aspects and empirical status of psychodynamic, brief, humanistic, existential, gestalt, person-centered, Adlerian, transactional analysis, reality therapy, supportive, clinical hypnotherapy, play therapy, psychodrama, and oriental approaches such as yoga, meditation, shavasana, pranic healing, reiki, tai chi etc.

Unit-III: Behavior therapies: Indications and empirical status of behavioral techniques such as desensitization (imaginal, in-vivo, enriched, assisted); extinction (graded exposure, flooding and response prevention, implosion, covert extinction, negative practice, stimulus satiation); skill training (assertiveness training, modeling, behavioral rehearsal), operant procedures (token economy, contingency management); aversion (faradic aversion therapy, covert sensitization, aversion relief procedure, anxiety relief procedure and avoidance conditioning); self-control procedures (thought stop, paradoxical intention, stimulus satiation); biofeedback (EMG, GSR, EEG, Temp., EKG); behavioral counseling, Group behavioral approaches, behavioral family/marital therapies.

Unit-IV: Cognitive therapies: Indications and empirical status of rational emotive behavior therapy, cognitive behavior therapy, cognitive analytic therapy, dialectical behavior therapy, problem-solving therapy, mindfulness based cognitive therapy, schema focused therapy, cognitive restructuring, and other principal models of cognitive therapies, trans diagnostic cognitive

behavior therapies

Unit-V: Systemic and Physiological therapies: Indications, and empirical status of family therapy, marital therapy, group therapy, sex therapy, interpersonal therapy; progressive muscular relaxation, autogenic training, biofeedback, eye- movement desensitization and reprocessing and other major therapies.

Unit-VI: Counseling and Psychoeducation: Behavioral, cognitive and humanistic approaches; counseling process; theory and procedures to specific domains of counseling; models of therapeutic education, family counseling for a collaborative effort towards recovery, relapse-prevention and successful rehabilitation with regard to various debilitating mental disorders.

Unit-VII: Psychotherapy research: Defining and estimating treatment effects, comparators issues, RCTs, causality in therapy research, biases and allegiance, common factors, specific effects, studying mechanisms, mediation and moderators, mediation analysis, non-inferiority and equivalence tests, identifying responders and moderators, therapist effect, design effect, nested and crossed designs, qualitative methods in understanding the causation, process-based therapy, client preference in therapy work and its implications, ethical issues in psychotherapy research

Clinical Placement – 2

Part – A is first-half of the academic Year - 2, starting from the beginning of the academic session. During the placement, trainees continue to focus on development of knowledge and skills further for complex and long-term psycho therapeutic interventions that are empirically supported and as per best practice guidelines. At this level of training, students understand the pros and cons of evidence-based and evidence-informed practice and consider individual variables of their clients and engage them in shared decision-making. This facilitates acquiring most valuable clinical skills to

perform empirically supported treatments also helps developing a cogent rationale for intervention strategies. Trainees focus and gain hands-on experience in offering therapies and techniques in special conditions where integrative/eclectic approach is the basis of clinical intervention. Undertake self-study supplementing didactic lectures on the methodology related to RCTs, qualitative research, public ethnographic research, process-outcome studies and meta-analysis and the process involved in scientific reporting of the experimental and qualitative findings. Trainees have opportunities to work with a wide range of theoretical orientations (including interpersonal, cognitive-behavioral, existential, humanistic, psychodynamic, multicultural, feminist, ACT, DBT, SFT, Trans diagnostic, trauma-focus CBT, EMDR and so on) and areas of specialization (such as gender issues, LGBTQA, disordered eating, sexual and relationship violence, suicide prevention, PTSD, career development, and crisis intervention) in a variety of multicultural settings. Additionally, trainees have an opportunity for supervision by a number of senior staff of other discipline as well resulting in supplementary learning opportunities of ethical practice through playing role of co-therapist and by clinical team participation.

The evaluation would include the skills acquired for;

- a) Functioning autonomously within the collaborative environment
- b) Ability to assume independent responsibility towards desired therapy outcome
- c) Building and maintaining therapeutic relationship
- d) Ability to carry out contextual and collaborative assessment
- e) Engaging clients in shared decision-making
- f) Maintaining therapy records as per the policy of the center
- g) Eliciting session and outcome feedback, and learn and reflect on them
- h) Maintaining confidentiality and adhering to ethical & professional guidelines

Part – B is second-half of Year-2. Trainees focus on acquiring professional competency in general medical setting through offering clinical workup and psychometric evaluations and a variety of advanced interventions targeted at psychological issues associated with acute, subacute and chronic health conditions. Recalling from the classroom discussion of behavioral medicine topics on the concept, theories, and models of clinical health psychology, trainees explore various domains of the professional

practice and evaluation issues within the context of medical referrals and health & illness across lifespan. During the clinical assignments trainees demonstrate a clear understanding of psychological and behavioral influences on health and illness and psychophysiological models of disease and their application in health and health care. Trainees discuss with ease the implications of contemporary research and developments in health psychology such as psychoneuroimmunology, psychobiology and the effects of psychotherapy on the biology of brain. On completion of the postings the trainees should have acquired the skills needed to apply models of behavior change, and design appropriate evidence-supported psychological intervention on the basis of an initial clinical health case formulation. Trainees over time learn to take account of the relevant issues such as psychological responses to illness, disability and hospitalization, adherence to medical treatment, symptom reduction, progress made/making, and ability to make therapeutic alliance in planning the short- and long-term goal-oriented interventions. Also, acquire competency to prognosticate the case on the basis of psychological theories, models of the etiology, progression, recovery, precursors, sequelae to psychological disorders associated with medical issues. Part-B posting will close by the end of Year – 2 with an Internal Evaluation and Viva Voce by faculty members shadowing and providing direct clinical supervision for a scheme of marks specified already.

The Part-B evaluation would include level of mastery acquired in various domains;

1. Ability to recognize and assess psychological responses to illness.
2. Ascertaining whether or not the presence of a psychological disorder and risk factors (using a range of assessment methods including psychometric assessments and interviews) in persons with a variety of chronic medical diseases
3. Integrating and synthesizing clinical data and presenting a diagnostic formulation, and treatment approaches
4. Ability to design and carry out an appropriate empirically-supported psychological treatment on the basis of an initial clinical health case formulation
5. Demonstrating a critical understanding of the role and responsibility of Clinical Psychologists in medical settings and professional and ethical issues related to working in health care settings and within a multidisciplinary team.

Psychotherapy Record Submission

Guidelines for Submitting Psychotherapy Records

Trainees are required to submit a total of five therapy records, one of which should specifically be a child therapy record. All the records should be printed with double line spacing and bound together in a single format. The records must be submitted in this bound format, with all of them included together. Registration number, Date first seen, Supervising Consultant's name and his/her signature should be shown on the opening page of each record. All records should be endorsed by the concerned supervisor and organized under the following heads:

1. Socio-demographic data
2. Presenting complaints
3. Summary of the case (history of present illness, significant past history, family history, personal history, pre-morbid level of functioning and findings on Mental Status Examination)
4. Diagnosis
5. Sociocultural and contextual factors including client's life situation
6. Short- and long-term management
7. Rationale for the intervention
8. Specific areas to be focused including short- and long-term objectives
9. Type and technique of intervention(s) used
10. Therapy processes
11. Changes in the type of therapy, approaches or objectives (if any, and reasons for the same)
12. Outcome
13. Goals to be achieved in short- and long-term follow-up
14. Future plans

Research Thesis

Guidelines for Submitting Research Thesis

Three (hardbound) copies with one softcopy on pen drive should be submitted in print (use double line space, and Times New Roman 12) format. All records should be certified by the concerned Guide and Co-guide (where applicable) and forwarded by the Head of the Department under sign and seal. A declaration by the researcher that the present work is the product of his/her own efforts, carried out under the guidance of the supervisor/s mentioned and doesn't form a part of any other degree in the past, shall be inserted prominently in all copies. The Thesis shall be organized under the following heads:

1. An Introduction to the work
2. Review of literature in the form of different Chapters (up to 4, depending on the nature of research area)
3. Methods (Aim/s and objectives, Hypotheses, Sample (with inclusion and exclusion criteria), Sampling technique, and Sample size (procedure followed to determine) and Study design)
4. Description of the tools/measures employed including those developed for the purpose of the study, the steps followed for modification or translation of the original tool, if any,
5. Procedure followed step by step and in detail
6. Statistical analysis carried out and the software employed
7. Results (using only one format)
8. Discussion (restricting to the data in hand)
9. Conclusion and implications (without grandiose claims)
10. Summary (crisp and in IMRD format)
11. References (APA guidelines)
12. Appendix – Copy of the following should be attached:
 - a) Consent form
 - b) Ethical committee clearance
 - c) Permission granted by the center/s for data collection
 - d) Tools employed in the research
 - e) Purchase bill or permission by author/s, or copyright waiver to use the tools
 - f) Declaration with regard to 'conflict of interest'
 - g) Copy of the report generated for plagiarism screening using approved software by the concerned university.

Scheme of Examination

Part-I (I Year)

Papers	Title	Duration	Marks		
			Final Assessment (Maximum)	Internal Assessment (Maximum)	Total
Group “A”					
Paper I	Psychosocial Foundations Of Behavior and Psychopathology	3hr.	70	30	100
Paper II	Psychiatry	3hr.	70	30	100
Paper III	Statistics and Research Methodology	3hr.	70	30	100
Practical: Psychological Assessments and Clinical Placement – I (Viva Voce)			70	30	100
Group “B”					
Submission of five cases of full-length Psycho-diagnostics Report			None	100	100
Total					500

Part-II (II Year)

Papers	Title	Duration	Marks		
			Final Assessment (Maximum)	Internal Assessment (Maximum)	Total
Group “A”					
Paper I	Biological Determinants of Behavior and Neuropsychology	3hr.	70	30	100
Paper II	Behavioral Medicine	3hr.	70	30	100
Paper III	Psychotherapy and Counseling	3hr.	70	30	100
Practical: Psychological Therapy and Clinical Placement – II (Viva Voce)			140	60	200
Group “B”					
Submission of five cases of full-length Psychotherapy Report			None	100	100
Group “C”					
Research Thesis			70	30	100
Total					700
